

Sustainability Education: Training Curriculum on Sustainable Management and Related Topics

The consortium of the Erasmus+ Project "Sustainable Management: Tools for Tomorrow" ([TOO4TO](#)) has developed a training curriculum for *Sustainable Management* and related topics.

TOO4TO Training Curriculum aims to equip students with an understanding of the barriers and pathways to sustainable development in an organizational context within the EU and beyond and to increase the learners' sustainable management competencies, such as problem solving, strategic thinking, as well as teamwork skills in a virtual environment. It presents the framework in which the material collected under the [TOO4TO Dynamic Material Bank](#) can be offered to students.

The Training Curriculum, in connection with the Dynamic Material Bank, targets university students and teachers, as well as non-academic trainers and practitioners. It provides a training framework for sustainability and sustainable management and offers ways to learn up-to-date knowledge and trends in the field.

While developing the Training Curriculum, the requirements of Innovation Pedagogy (INNOPEDA®), developed by one of the partner organisations of the project, Turku University of Applied Sciences, have been taken into account. The Innopeda approach not only provides an innovative approach to learning and teaching, but also ensures the inclusion of learning and teaching methodologies that help (further) development of sustainable management competences as described above.

The Training Curriculum has been designed in a modular form to provide the learners with an opportunity and flexibility to focus on skills and knowledge, which are best suited to support their success in future work and life. The modular structure also helps teachers to integrate the training curriculum into their teachings in the best-fitting way.

The Training Curriculum is an open-access intellectual output of the TOO4TO project: The entire curriculum (original version, in English) as well as the summaries in partner languages (Finnish, German, Lithuanian and Polish) can be accessed via the project [website](#). The project consortium will start piloting the training curriculum during the first quarter of 2022. Gathered feedback and experiences will be reflected in the Training Curriculum and it will be updated accordingly (if needed).
